SLIDE 1

Particle Artwork Tool

Interactive camera-driven particles for visual communication design.

This deck summarizes why the tool was made, how it supports design practice, and the major UI/UX decisions behind it.

SLIDE 2

Why I Made This App

- I wanted a digital mirror that feels expressive, not just decorative.
- Movement becomes composition, turning users into active visual collaborators.
- The project explores motion, emotion, and identity as design material.
- It bridges performance-based interaction with communication design workflows.

SLIDE 3

How It Supports Visual Communication Design

- Works as a motion sketchbook for rapid visual ideation.
- Helps test symbolic interaction (example: heart gesture, heart particle form).
- Prototypes embodied interfaces where body language is the input system.
- Generates source material for posters, campaign visuals, and editorial experiments.

SLIDE 4

Design Thinking Process

- **Intent and audience:** playful experience for classmates and critique contexts.
- **Interaction-first prototyping:** validate gesture/face behavior before polish.
- **Visual behavior tuning:** refine glow, density, speed, and color for readability.
- **Reflection and legibility:** include debug layers to reveal system logic in critique.

SLIDE 5

Key UI/UX Decisions (1/2)

- **Two-scene menu:** hand vs face modes reduce startup complexity.
- **Dark visual framing:** high contrast keeps focus on particle behavior.
- **Camera-hidden interaction:** users see abstraction first, not literal camera feed.

SLIDE 6

Key UI/UX Decisions (2/2)

- **Gesture-to-feedback mapping:** pinch, clap, and heart each have clear outcomes.
- **Integrated debug panels:** supports transparency and design explanation.
- **Status + back navigation:** keeps orientation and reduces user friction.

SLIDE 7

Brief Development Note

The build process was iterative: prototype interactions, test with camera input, tune visual behavior, then improve interface clarity. Technical systems are present, but the primary goal is design-led communication.

> Main takeaway: this is an interactive design tool first, and a technical demo second.

SLIDE 8

Thank You

Questions, critique, and next-iteration feedback are welcome.

Use this deck directly in browser presentation mode, or adapt each slide into your class template.
